

STEALTH[®]

FIRST IN CONCEALMENT[™]

The STEALTH[®] Concealment Longevity Self Assessment:

The worldwide growth in wireless connectivity means concealment systems are more prolific than ever. Focused on what's next, site owners often ignore the signs of aging on older systems. The problem isn't just aesthetic; poorly maintained sites can lead to injury and costly repairs.

Take this test to determine if your concealment site may be at risk:

1. Is your site less than 2 years old?	yes	no
2. Is it in a climate with four seasons?	yes	no
3. Has there been any tornadic activity or severe weather of any kind since the installation?	yes	no
4. Is there a regular schedule by which the equipment and concealment materials are inspected/maintained?	yes	no
5. Was the site installed as engineered/drawn?	yes	no
6. Is the company that designed the concealment still in business?	yes	no
7. Is the company that installed the concealment still in business?	yes	no
8. Is the concealment located within a quarter mile (or less) of a residential area?	yes	no
9. Is the roof (if applicable) constructed of traditional building materials?	yes	no
10. Have you owned the structure since it was installed?	yes	no

SCORE:

(1 to 4) "no" answers means you need to keep an eye on that site!
All built environments have a life span, and all benefit from continuous care.

(5 or more) "no" answers indicate an at-risk site,
and it's likely only a matter of time before you're making apologies or costly repairs.
