

## The STEALTH® Concealment Longevity Self Assessment

The worldwide growth in wireless connectivity means concealment systems are more prolific than ever. Focused on what's next, site owners often ignore the signs of aging on older systems. The problem isn't just aesthetic; poorly maintained sites can lead to injury and costly repairs.

### IS YOUR CONCEALMENT SITE AT RISK?

	YES	NO
1. Is your site less than 2 years old?		
2. Is it in a climate with four seasons?		
3. Has there been any tornadic activity or severe weather of any kind since the installation?		
4. Is there a regular equipment and concealment inspection/maintenance schedule?		
5. Was the site installed as engineered/drawn?		
6. Is the company that designed the concealment still in business?		
7. Is the company that installed the concealment still in business?		
8. Is the concealment located within a quarter mile (or less) of a residential area?		
9. Is the roof (if applicable) constructed of traditional building materials?		
10. Have you owned the structure since it was installed?		

### SCORE

1-4 NO answers means you need to keep an eye on your site! All built environments have a life span, and all benefit from continuous care.

5+ NO answers indicates an at-risk site, and it's likely only a matter of time before you're making apologies or costly repairs.
