

STEALTH® Base Cabinet Enclosure

In need of a small cell concealment solution? How do you conceal your site to blend into the current cityscape? Our patent pending STEALTH® Base Cabinet Enclosure may just be the answer you're looking for. The simplest way to turn an existing, structurally sound, pole into a small cell site without the cost or hassle of replacing the entire pole. By enlarging an existing foundation and adding this cabinet to the base, we increase the capacity of the pole by transferring a portion of the load through new cabinet and foundation thus allowing the addition of antennas to the top of the structure. Benefits of this small cell solution include:

- Minimal headache and cost versus adding a new pole
- Customized sizing to hold all necessary equipment
- Customized shapes and colors
- Design can include ventilating louvers
- Overall improved aesthetics
