

QUARTER 1 - MARCH 2017

**SMALL CELL, EVERYWHERE**

Check out our new **Small Cell Portfolio** highlighting STEALTH®'s capabilities for chimneys, light poles, rooftop pods, cupolas and more. Due to high demand and recent popularity, we've also created new flyers for our add-on components. The **StealthSkin™ Topper** and the **STEALTH® Base Cabinet Enclosure** can be added to any existing, structurally sound utility, traffic, light or banner pole.

**MERCER, PA SITE INSTALL VIDEO**

**Watch** the progression of this beautiful steeple concealment in our newest site installation video. From beginning to end, STEALTH® ensured the steeple replacement would Go Unnoticed™ to preserve the integrity of their church and skyline, all while providing residents better mobile coverage.

**SHINE BRIGHT, EAGAN**

STEALTH® recently had the opportunity to work with the City of Eagan, Minnesota on a completely custom project. This three-legged, 179' radial antenna concealment tower included a 10' tall roof and was completed in December 2016. One of the best parts about this concealment is the LED, color-changing, light package.

Check out a video of the installation from start to finish, [here](#). It's a must see!

**FEATURED SITE**

In Baltimore, Maryland we recently provided a rooftop faux watertank, complete with a custom painted woodgrain effect courtesy of our in-house artist. This concealment measures in at 18' tall with a diameter of 15'. What a great look for this urban area!

**SITES UNSEEN**

Our sites are designed to Go Unnoticed™, that's the point, but here's our chance to let these creative sites shine. Explore a few of our newest sites above and view our photo galleries for examples of rooftops, silos, steeples, small cell, DAS, trees, poles and more!
