

Ventilating Concealment Radomes

Wireless concealment is hotter than ever! And Raycap | STEALTH® is making the coolest concealments in the industry (literally). Based on field studies and customer feedback, we've designed a unique, ventilated radome that allows for increased air-flow to antennas. More air means less heat-related service disruption, and longer antenna life.

Our ventilating radomes are:

- Available in any diameter
- Available in heights up to 12'
- Able to be painted any color, or primed and paint-ready
- Insect-proof
- Field-tested, and conform to our rigorous RF-performance standards (the highest in the country)
- Made from ABS plastic

Looking for the coolest products to serve this hot market? Check out our ventilating concealment radomes and our metal [perforated radomes](#) for your radios. Contact your local sales representative for more information.
